

Delocalization of the Soul and Feelings

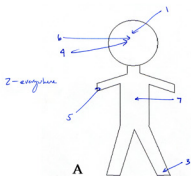

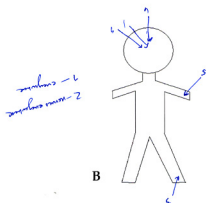

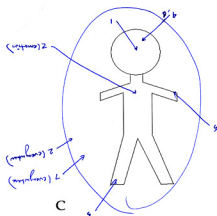

Figure A. This 5 year old child has placed the "soul" at the center of the body, but has not limited the placement of the "feelings" to any particular area, stating that they are "everywhere."

The 8-year-old that did **Figure B** has done similarly to figure A in that the "feelings" have been delocalized. The child associated "feelings" with "the nerves" and related that they are everywhere. Additionally, this child has chosen not to place the soul in any spot, but rather everywhere around the body.

In **Figure C**, the child (age 9) has not localized the "soul" or the "feelings," as in figure B. However, this child has taken an one step further to clarify that the "emotion" part of the "feelings" is actually located in the heart.
